(over)

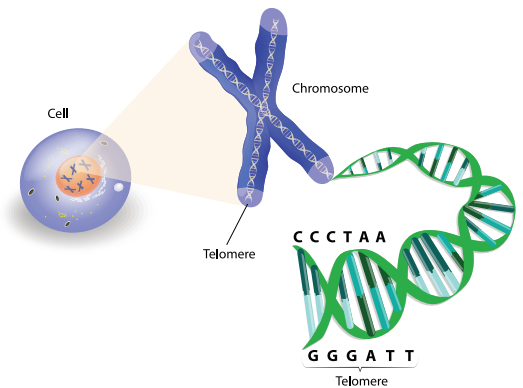

In 2009, The Nobel Prize in Medicine was awarded for linking shortened telomeres to aging and illness. Telomeres are the end stretches of the DNA helix. Hundreds of studies have proven that increasing telomere length at the end of the DNA helix allows cells to replicate longer. As pets age, their telomeres become progressively shorter, which is a natural part of the aging process.

Introducing TeloMore® Astragaloside IV, produced by a unique, cost effective proprietary production process. Astragaloside IV has been reported in numerous studies to significantly diminish chromosome fraying, improve telomeres, enhance autoimmune system functions, and extend life span. Anecdotal reports also describe increased energy, more youthful endurance, improved vision, increased brain function, memory, vitality, muscular strength and much more. Astragaloside IV and/or its derivatives have been known to be in use for over 15 years with no reported adverse occurrences.

How does TeloMore® work?

As pets age, their telomeres become progressively shorter, which is a natural part of the aging process. TeloMore® stimulates the production of the enzyme that retards or reverses the process, and therefore extends cell longevity.

TeloMore® is available in capsules of 5 mg. (60 capsules/bottle) or 50 mg. (30 capsules/bottle) of Astragaloside IV. The 5 mg. capsules are intended for cats, dogs and other small animals, the 50 mg. capsules for horses and other large animals.

Recommended Dosage:

For animals under 25 lbs., give one 5 mg. capsule daily. For animals over 25 lbs., give two 5 mg. capsules daily. For horses and other large animals, give two to three 50 mg. capsules daily. Always give TeloMore® between meals. After each year of usage, take a 2 - 4 week pause before resuming consumption. The optimal time to begin using TeloMore® is when the animal has attained 20 - 25% of its normal life expectancy.

TeloMore® is sold strictly as a nutraceutical botanical and/or dietary supplement and is not intended to diagnose, heal, treat, cure or prevent any disease or condition or infringe upon any valid patents or pending patents.

No medical claims whatever are made for this product.

Consult your veterinarian or animal health specialist to make sure that any other health food supplements or medicines are not contraindicated, counterproductive or negatively affected by TeloMore® Astragaloside IV.
