

# REDUCTRA™

**GREATLY IMPROVES THE EFFECTIVENESS AND ANTI-GLYCATION FACTOR OF MOST DIABETIC NUTRACEUTICALS (BY 25-150%), AND EXTENDS FUNCTIONALITY BY 1 - 4 HOURS.**

**REDUCTRA™ works exceptionally well by itself, or in conjunction with numerous other nutraceutical blood glucose reducers, including (but not limited to):**

Amla Extract (Indian Gooseberry), Banaba, Berberine, Bitter Melon, Chlorogenic Acid, Chromiums, Cinnamon Extract, Clove Extract, Fenugreek Extract, Gymnema Sylvestre, Indian Kino (Pterocarpus Marsupium), Irvingia (African Mango), Ivy Gourd Extract, Macqui Berry, Magnesiums, Mangosteen, Milk Thistle, Moringa, Mulberry Extract, Phloridzin, Pterostilbene, Pycnogenol, Vanadiums, White Willow Bark

**REDUCTRA™ IS** a dietary supplement for blood sugar optimization utilizing standardized, slowly soluble (GRAS approved) Chitosan, which keeps it effective far longer than the more common, very soluble forms.

**REDUCTRA's** highly purified, natural, high molecular weight, slowly soluble form of chitosan has been enzymatically processed, and improves glucose metabolism sugar spikes throughout digestion, absorption and excretion. It also helps to significantly lower HbA1c and glycemic index.

**REDUCTRA™ IS NOT** the same as regular insoluble chitosans, which are normally used for fat absorption. **It is not** a chitosan compound, salt or primary oligosaccharide. **REDUCTRA™** should not be confused with any of the above, since those products are not designed to work with blood glucose reducing agents, and they tend to dissipate quite rapidly from the system.

**REDUCTRA™** should not be used with prescription drugs, injectables, or similar agents without the approval of a physician, endocrinologist, or qualified health practitioner, since it could possibly lead to insufficient blood glucose levels.

**SUGGESTED USE:** Take one or two (500mg) capsules, either separately or in conjunction with other blood glucose reducing supplements, once, twice or even three times daily, preferably with water, just before or immediately eating carbohydrates.

**REFERENCE:** Chitin, Chitosan, Oligosaccharides and their Derivatives, Biological Activities and Applications, CRC Press: Food Science and Technology

*Just one to three capsules, taken each day,  
Helps to keep blood sugar levels at bay.*

PACKAGED: 60 capsules/bottle  
Patent Pending
